A11M Amplifier

Technical Product Data

Features

- Excellent Noise Figure F < 1.8dB
- Excellent Gain G = 30dB
- Passes GPS, Galileo & GLONASS L1/L2
- 0dB to 30dB Variable Gain Option Available
- IIP3, PidB, RoHS & WEEE Compliant

Description

Designed with the thin link margins of satellite navigation systems in mind, the A11M Amplifier is a single stage gain block that covers the GPS, Galileo, and GLONASS frequencies. The device features 30dB of gain and a noise figure of less than 1.8dB. Since the product consumes less than 16mA, it may be powered by the GPS receiver's antenna voltage output.

The A11M amplifier comes with many available options to meet your specific needs. Please call, fax, email (sales@gpssource.com), or visit our website (www.gpssource.com) for further information on product options & specifications.

Notes:

- 1. With Powered Option, any or all RF ports (input or output) can be DC Blocked or can pass the powered DC voltage
- 2. Maximum combined DC current draw out all ports of the device is a function of the DC input voltage and desired DC output voltage, according to the following:

For powered option with a wall mount transformer (Voltage Input = 110/220/240 VAC), $V_{DC\ IN}$ is 9V.
